# DESIGN CONSIDERATIONS

---

# Design Considerations

- Ease of use
- Modern and sleek UI
- Incorporate the Curtin colour scheme and style
- Easy to navigate
- Layout should be responsive and usable on any resolution.
- Admin and normal users

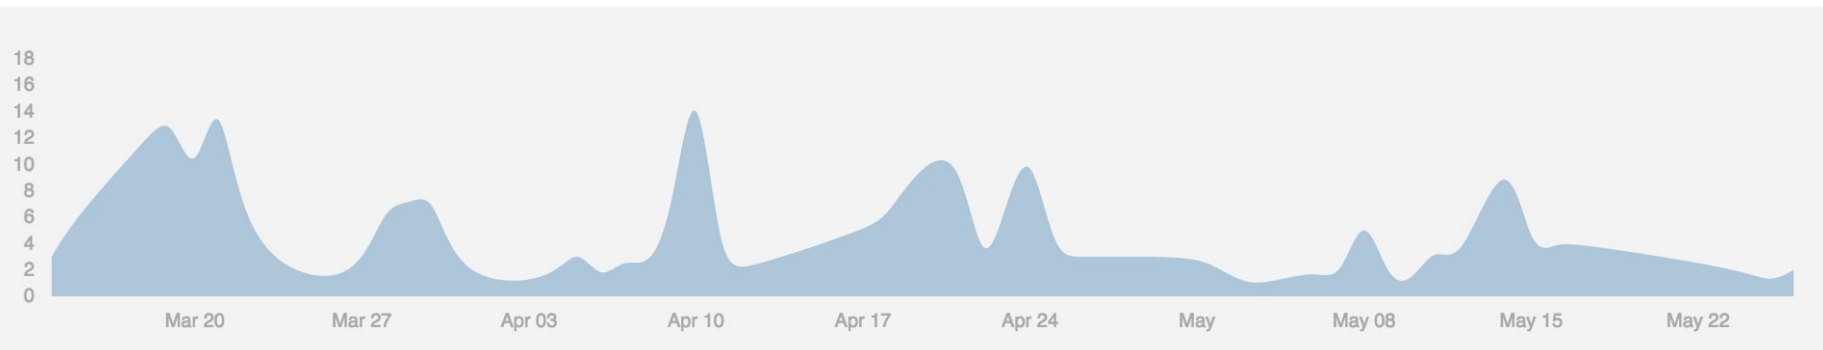

# PROJECT MANAGEMENT ISSUES

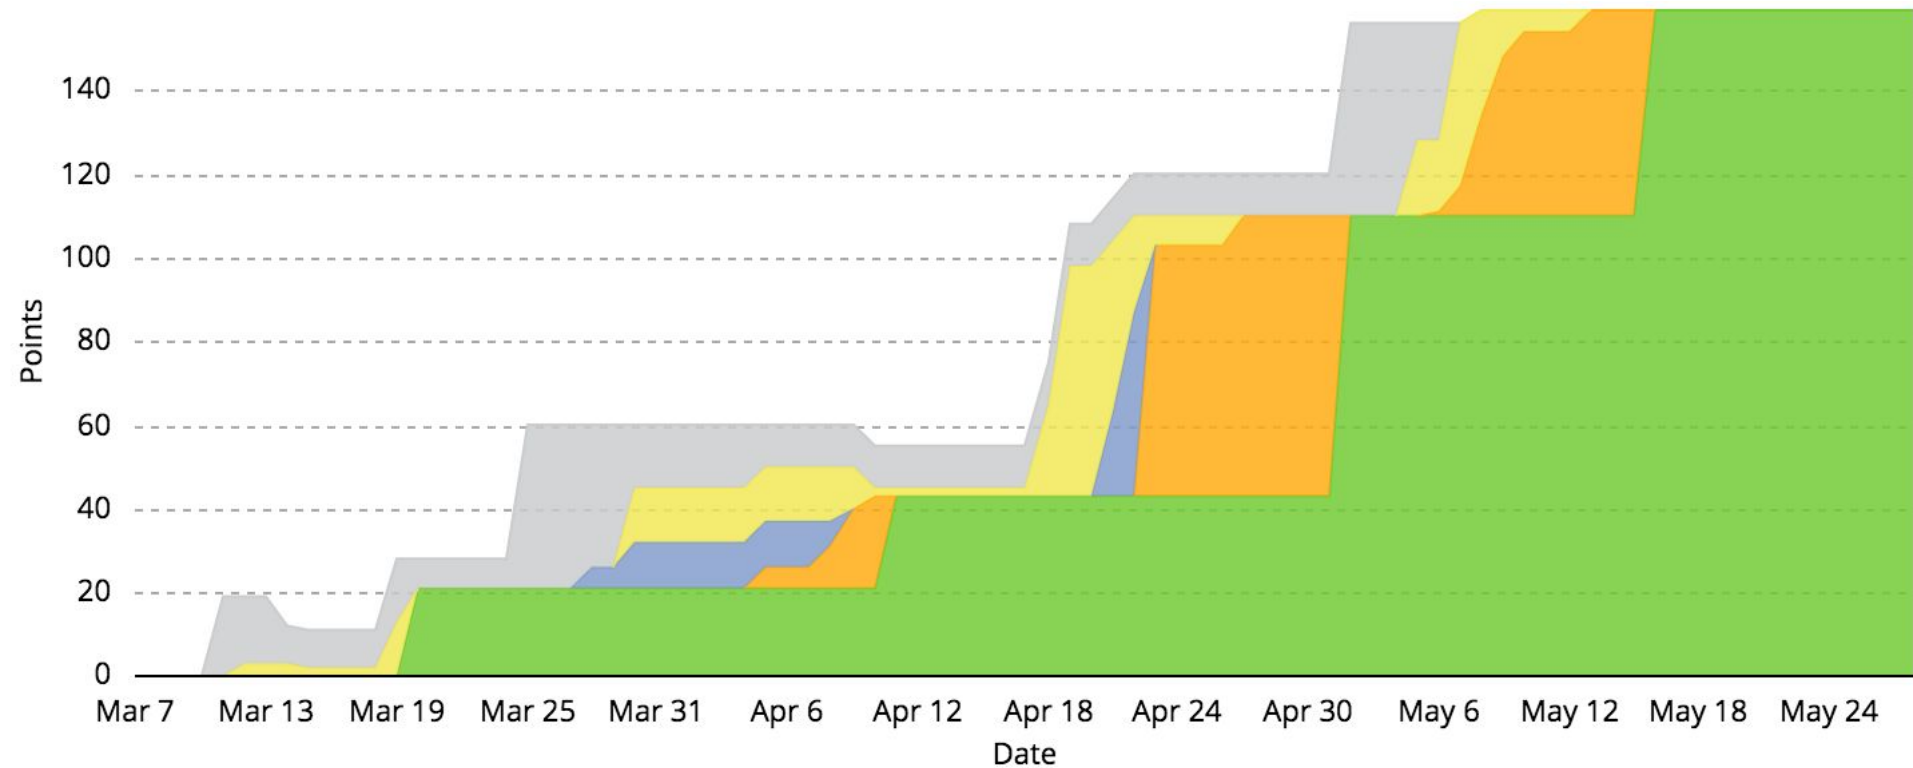

---

# What Went Well

- Good communication between group members
- Usage of git: version control, tracking work
- Working in pairs allowed us to help each other with issues and get different perspectives on tasks.

# Cum Flow

# What Did Not Work

- Sprint 1

- Unfamiliarity with agile method
- Slow start
- Unfamiliarity with group members
- Unfamiliarity with platform

- Sprint 2

- Time management
- We started getting lax

# How Significant Issues Were Handled

- Having multiple people trying to edit the website at the same time would've caused issues with versions, using Git solved this problem.
- Working in pairs handled the issues with learning a new coding language.

# What Could Have Been Done Better

- Time Management - Some tasks in Sprint 2 were pushed back due to members being busy with time commitments in other units.
- Familiarised ourselves with agile methodology beforehand to save time and streamline the development process

# DEMONSTRATION
